6	13.4	27.7	16.7	37.3
7	17.4	32.7	23.0	42.8
8	22.3	38.2	30.8	48.5
9	28.2	44.0	39.8	54.3
10+	34.9	50.0	49.7	59.9

Total N*	752	1,163	342	735
----------	-----	-------	-----	-----

*N is the total sample size used in the logistic regression analysis to generate predicted recidivism values. It is not the sample size with a particular Static-99 score. This is because logistic regression uses information on the relationship between Static-99 and recidivism in the complete dataset to generate predicted values.

Note: Some of the 10 year CSC rates are lower than the 5 year rates due to sampling error (not all of the offenders in the 5 year sample were followed for the full 10 years).
